Clinical Data: NONUNION LT WRIST FX
733.82

Exam: TOMOS

Plain topography was performed in the AP and lateral projection at 2 mm intervals through the wrist and distal radius. There is a nonunion fracture of the distal radius with a fixation plate on the lower surface of the distal radius. There is a fracture through the distal margin of the fixation plate. Two screws traverse the distal radius navicular and lunate, with fusion at the radiocarpal joint. There is sclerosis of the distal radial fracture fragment, and irregularity and nonunion at the fracture line. Additionally, there is erosion of the distal ulna. There is demineralization in the carpal bones.

IMPRESSION: Nonunion distal radial fracture. Volar fracture of fixation plates. Status post radiocarpal fusion.
